RE: Entry-Level Data Analyst, Jobright

Dear Hiring Manager,

I am applying for the Entry-Level Data Analyst position with Jobright. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines Australian Data Intern experience with PostgreSQL, SQL, advanced Excel, relational modelling, metric definition, data validation, reporting requirements, and careful documentation for reliable reporting systems.

At AYLA Solutions in Australia, I gathered and documented reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for business performance tracking. Participating in Agile planning and reviews strengthened my ability to clarify requests, organize analytical work, communicate progress, and maintain usable documentation.

My published portfolio demonstrates the technical foundation Jobright needs for consistent metrics and reusable analysis. Across e-commerce, healthcare, and workforce projects, I built normalized PostgreSQL models, defined business rules and KPIs, and used joins, CTEs, rankings, running totals, lag comparisons, and window functions to produce decision-focused findings. I also added repeatable validation and GitHub Actions checks to detect data or logic issues. The repositories include SQL-grounded AI-assisted recommendations and Power BI KPI and dashboard planning; interactive dashboard implementation remains my next development stage.

Earlier roles at Trans Globe Education and Arihant Investment developed my ability to manage simultaneous requests, coordinate process updates, and protect the accuracy and confidentiality of business records. Graduate work in Databases and Business Intelligence, Business Systems Analysis, Analytics and Business Decision Making, and Project Management further strengthened my understanding of relational data, reporting design, and business performance measurement.

Jobright's focus on AI-guided job search is especially compelling because it joins data, product, and meaningful user outcomes. I would welcome the opportunity to contribute dependable SQL analysis, consistent metric definitions, rigorous quality checks, and an active-learning mindset while developing stronger production dashboard and reporting-automation capabilities.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
